SECTION 1

GENERAL DESCRIPTION

1-1. INTRODUCTION

The DME-450P digital multi effects is a small video switcher capable of creating a variety of digital multi-effects without using a time base corrector (TBC).

Additional special effects are also possible when it is used with an editing control unit, video cameras, VCRs, and character generators. This unit particularly meets the needs of the operator who is using a video switcher for the first time, and it matches the simple production needs of a school or office.

1-1-1. Features

- **Effects without using a TBC**

A TBC is generally required for electronic editing with effects. By means of two sets of built-in field memories, you do not need to use the TBC. You can edit video materials and use effects even when those materials are supplied from VCRs such as Umatic VCRs.

- **Digital multi-effects (DME)**

Cut, mix, wipe (five typical wipe patterns) and DME patterns including tumble, flip, slide and scroll can be selected simply by pressing the respective buttons. In addition, the DME-450P has 117 DME patterns and 156 wipe patterns. Four patterns which are used frequently can be registered in the USER 1 to 4 buttons and can be recalled quickly by pressing the USER button. A border can be added to an effect.

- **Input and output connectors which meet needs for simple editing**

The input connectors are for:

Three primary source inputs

(In addition to these, the signal generated by the built-in color background generator can be used as an input source.)

One component signal input of the Betacam format

The output connectors are for:

Two program outputs

One component output with special effects

(This signal is to be used for a BVS-3000 series video switcher.)

One key output

Three sync outputs

Other connectors are for:

Interface input/output for editing control units and BVS-3000 series video switcher

- **Effects even in two-VCR editing**

Electronic editing with effects generally can be made by using A/B roll editing. Using the DME-450P series with digital multi-effects, you can edit using only two VCRs, a recorder and a player. Electronic A/B roll editing using a recorder and two players is, of course, possible.

- **Serial interface with editing control units**

Two-VCR editing is possible using this unit together with an RM-450 editing control unit.

A/B roll editing can be controlled from a BVE-600 editing control unit with the T1 and T2 control signals and from a BVE-900 through the RS-422 serial interface.

This unit can be a combination switcher when it is used together with a BVS-3000 series video switcher.

- **Rack mounting**

The unit can be mounted on an EIA standard 19-inch rack.

1-1-2. Precautions

- **On safety**

The DME-450P should be operated on 220 to 240 V AC, 50/60 Hz.

Should any solid object or liquid fall into the cabinet, unplug the unit and have it checked by qualified personnel before operating it any further.

Unplug the unit from the wall outlet if it is not to be used for an extended period of time. To disconnect a cord, pull it out while holding the plug. Never pull the cord itself.

- **On installation**

Allow adequate air circulation to prevent internal heat buildup. Do not place the unit on surfaces (rugs, blankets, etc.) or near materials (curtains, draperies) that may block the ventilation slot.

Do not install the unit near heat sources such as radiators or air ducts or where it is subject to mechanical vibration or shock.

- **On cleaning**

Clean the cabinet, panel and control with a dry soft cloth, or a soft cloth lightly moistened with a mild detergent solution. Do not use any type of solvent such as alcohol or benzine which may damage the finish.

1-2. LOCATION AND FUNCTIONS OF PARTS AND CONTROLS

1-2-1. Control Panel

• BKGD/BORDER COLOR section

This section selects the background and border colors.

1 HUE buttons

Select the hue of the background and border colors among black, white, red, green, blue, magenta, yellow, and cyan. When selecting the hue of the background color, the lamp on the BORDER ON/OFF button 4 should go out. If the lamp is on, press the BORDER ON/OFF button so that the lamp goes out.

To select the hue of the border color, press the BORDER ON/OFF button so that the lamp on the button lights up, and then select the hue desired. The background and border colors can be selected independently.

2 CHROMA (chrominance) buttons

Select the chrominance level of the background and border colors.

Select one of the three: H (for high level), M (for middle level) and L (for low level).

The chrominance level of the background and border colors can be selected independently.

3 LUM (luminance) buttons

Select the luminance level of the background and border colors.

Select one of the three: H (for high level), M (for middle level) and L (for low level).

The luminance level of the background and border colors can be selected independently.

4 BORDER ON/OFF button

Selects whether or not to add the border to the effects.

To add the border to the effect, press this button so that the lamp on the button lights up. Every time you press this button, the lamp lights up and goes out in turn.

• Cross point buses section

Selects the picture before and after executing an effect.

5 BKGD (background) bus buttons

Select the picture which will appear after a special effect such as cut, mix, wipe, or digital multi effect ends.

Buttons 1 to 3 respectively correspond to the VIDEO IN 1 to 3 connectors on the connector panel. By pressing one of these buttons, the corresponding input signal is selected. By pressing the COLOR BKGD button, the background color, which was set at the BKGD/BORDER COLOR section, is selected.

When the BKGD bus signal is output from the PGM OUT connectors, "BKGD" beside the bus buttons row will light up.

6 FRGD (foreground) bus buttons

Select the picture which appears before a special effect such as cut, mix, wipe, or digital multi effect starts.

Buttons from 1 to 3 respectively correspond to the VIDEO IN 1 to 3 connectors on the connector panel. By pressing one of these buttons, the corresponding input signal is selected. By pressing the COLOR BKGD button, the background color, which was set at the BKGD/BORDER COLOR section, is selected.

When the FRGD bus signal is output from the PGM OUT connectors, "FRGD" beside the bus buttons row will light up.

7 FRGD FREEZE (foreground freeze) selector

Determines whether or not to freeze the FRGD bus picture when executing mix, wipe, or digital multi-effects.

IN: freezes the FRGD bus picture

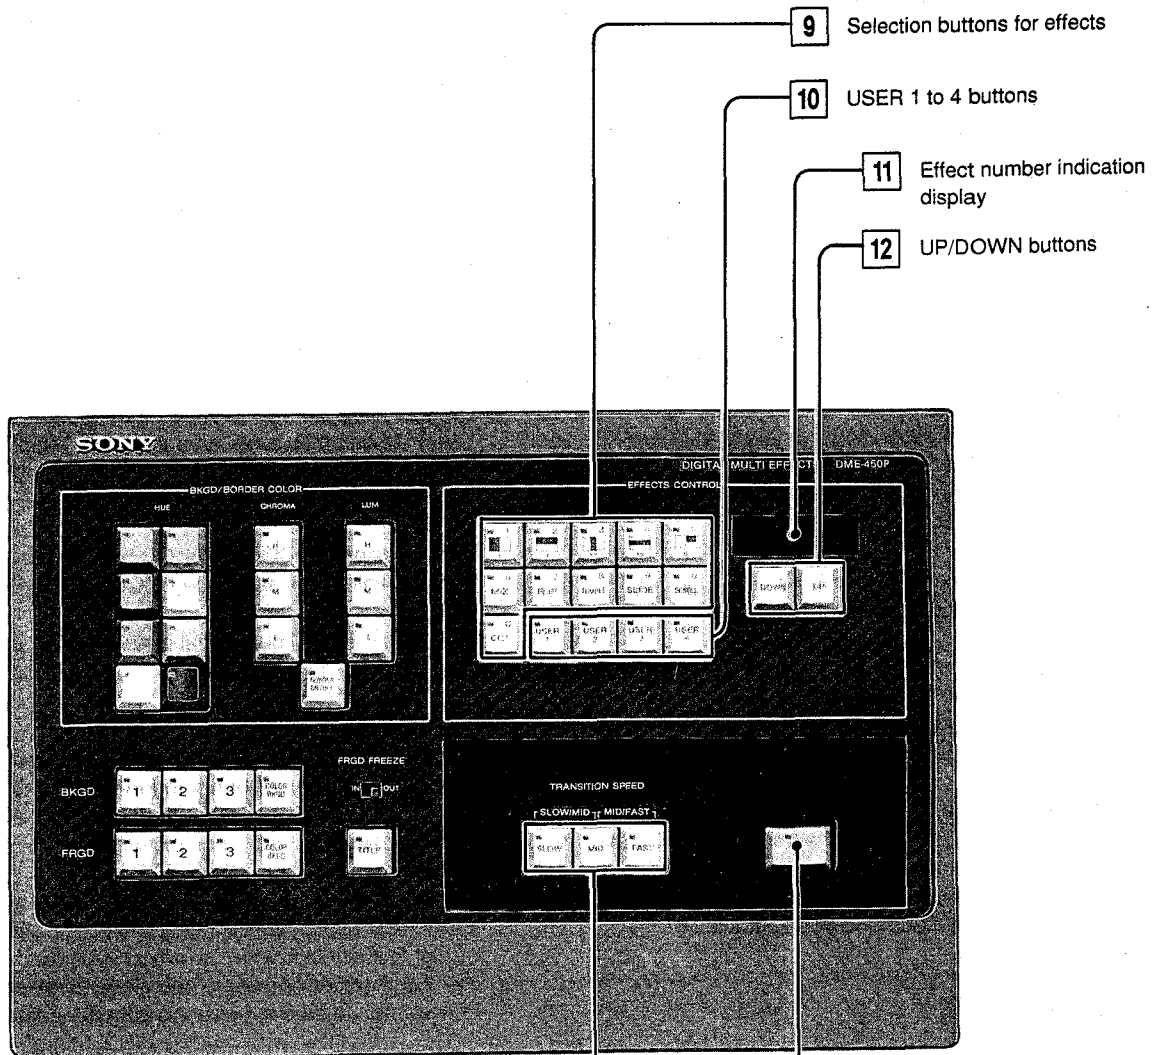

OUT: does not freeze the FRGD bus picture

- For editing using only two VCRs (with the RM-450), the FRGD bus picture will be frozen regardless of the setting of this selector when an effect is performed.
- For A roll editing using one player with the BVE-600 series, be sure to have this selector set to IN all the time.

8 TITLE button

Superimposes the FRGD bus characters on the BKGD bus picture. Digital multi-effect can be applied to the characters. Press the TITLE button while holding down the FRGD bus button which corresponds to the character signal.

EFFECTS CONTROL section

Effects transition section

• EFFECTS CONTROL section

Selects the effect to be performed.

9 Selection buttons for effects

(wipe) buttons

Select the wipe effect, which changes one picture to another with a wipe pattern moving across the screen. Press the desired wipe effect pattern button out of five typical preset wipe patterns.

MIX button

Selects the mix effect in which a FRGD bus picture dissolves into a BKGD bus picture.

Digital multi-effect selection buttons

Select four preset DME patterns: FLIP, TUMBLE, SLIDE or SCROLL.

CUT button

Selects the cut effect in which a FRGD bus picture is instantaneously changed to a BKGD bus picture.

10 USER 1 to 4 buttons

Used to assign any effects available on this unit to these buttons so that you can quickly select the desired effects. Generally assign the effects you use frequently to these buttons.

The buttons having the numbers 0 through 9 on them **9** will be used to designate the effect numbers desired.

While keeping one of the USER 1 to 4 buttons pressed, enter a 4-digit number of the effect desired by using buttons with numbers 0 through 9 or UP/DOWN buttons. To clear the entered numbers, press the C button while keeping the USER button pressed.

11 Effect number indication display

Displays the effect number in four digits.

12 UP/DOWN buttons

Used to search for the effect number.

The effect number shown on the effect number indication display increases or decreases when you press once.

When you hold down the UP button, the number increases continuously. When you hold down the DOWN button, the number decreases continuously. These are activated while one of the USER 1 to 4 buttons is pressed.

• Effects transition section

Sets the transition duration for which the picture is changed from one to another, and executes the effect.

13 TRANSITION SPEED buttons

Select one of the durations listed below, which are appropriate for the selected effect transition.

SLOW button: about 3.2 seconds.

SLOW and MID buttons: about 1.6 seconds

MID button: about 1.0 seconds

MID and FAST buttons: about 0.8 seconds

FAST button: about 0.5 second

When SLOW, MID and FAST buttons are used in combination, the one button should be pressed and held down while pressing the other button.

14 TAKE button

Starts the effect transition.

When selecting a wipe or mix:

The FRGD bus picture signal is output by pressing the TAKE button once. By pressing the TAKE button once more, the FRGD bus picture is switched to the BKGD bus picture with effect and then the BKGD bus picture appears on the video monitor.

When selecting a DME pattern like picture-in-picture, static mirror and so on:

By pressing the TAKE button once, effect is started. By pressing the TAKE button once more, effect is completed and the BKGD bus picture appears on the video monitor again.

(The bus whose signal is effected and the transition duration depend on the effect selected. For details, see "Types of effects" on page 1-26.)

1-2-2. Main Unit

• Connector panel

1 T1/CUE connector (BNC type)

2 T2 connector

Input the trigger signal to start the effect for automatic editing.

For automatic editing using an RM-450, hook up the CUE connector of RM-450 to the T1/CUE connector.

For automatic editing using a BVE-600, hook up the T1 and T2 connectors of BVE-600 to the T1/CUE and T2 connectors.

3 VIDEO OUT connector (12-pin)

Outputs the component video signal with effects (Y/R-Y/B-Y without sync).

Connect to the KEY FILL INPUTS EFF EXT 1 connector (12-pin) of the BVS-3200CP video switcher.

4 VIDEO IN 1/2/3 connectors (BNC type)

Connect the video signals from video cameras, VCRs, etc. The signal fed into the connectors can be selected with the FRGD bus or BKGD bus buttons on the control panel.

When using this unit with the BVS-3000 series video switcher (which accepts the composite video signal), connect the VIDEO IN 1 connector to the KEY 1 BUS OUT connector (BNC type) and the VIDEO IN 3 connector to the AUX B.B connector of the BVS-3000 series video switcher.

5 VIDEO IN connector (12-pin)

Connect to the KEY 1 BUS OUT connector (12-pin) of the BVS-3200CP video switcher. The format of the signal at this connector is Y/R-Y/B-Y and black burst.

You cannot use both the signals as the FRGD bus picture; one is fed to this connector and the others are fed to the VIDEO IN 1/2/3 connectors. First, determine the signal you are going to use and then select it with the COMPOSITE/COMPONENT switch on the AD-44P board.

6 KEY OUT connector (BNC type)

Outputs the key signal which is the frame signal corresponding to the picture effected. When the TITLE button is on (the lamp on the TITLE button is lit) and the characters are selected, the key signal which is the character (title) is output from this connector. When using this unit with the BVS-3000 series video switcher, connect this connector to the KEY SOURCE INPUTS EFF EXT KEY 1 connector.

7 SYNC OUT 1/2/3 connectors (BNC type)

Output the internal composite sync signal or the signal fed to the VIDEO IN 3 connector. Connect to the external sync signal input connector of a VCR, etc. Select either the internal or external sync signal with the INT SYNC/EXT REF switch on the AD-44P board.

8 PGM OUT 1/2 connectors (BNC type)

Output the program video signals with effects. The signals output from both connectors are the same. Connect to the VCRs and video monitors. To use with the BVS-3000 series video switcher(excluding BVS-3200CP), connect it to the KEY FILL INPUTS EFF EXT 1 connector.

9 CONTROL PANEL connector

Connect to the control panel of the DME-450P with the 25-pin control cable supplied.

10 SWITCHER/EDITOR connector

Use this connector to use with the BVS-3000 series video switcher or the BVE-900 series editing control unit. Connect to the VIDEO SW'ER connector using the 9-pin remote control cable to use with the BVE -900. Connect to the DME-450 connector using the 9-pin remote control cable to use with the BVS-3000 series video switcher.

11 ⚡ (ground) terminal

Connect to the ground bus if necessary.

12 AC IN connector

Connect to an AC power source with the AC power cord supplied.

How to open the front panel

• Notes

Be sure to turn off the POWER switch before opening the front panel and touching the internal circuit boards.

• Front panel/Internal circuit boards

1 POWER switch

Press the ON side to turn the unit on. The lamp above the switch lights up and the buttons on the control panel are set to the initial status with their corresponding lamps being lit. Press the OFF side to turn the unit off.

2 BREAKER

Cuts the primary AC power when excessive current flows and the green protuberance pops up. Check and repair the unit first, and then press this green protuberance to reset.

3 RM-450/BVE-600/BVE-900/BVS-3000 series unit selector

Selects the appropriate unit to be connected. The DME-450P can be controlled from the connected equipment as well as from its own controller. The selector is factory-set to the position which selects the BVE-600.

• Notes

- When this selector is set to RM-450, the FRGD picture is frozen while executing the effect. In order not to freeze the picture, be sure to set this switch to BVE-600 or BVE-900.
- Be certain to turn off the POWER switch when changing the position of this selector. Note that the switching operation is not effective if the selector position is changed with the POWER switch set to ON.

4 FREEZE timing selector

Adjust the timing of the FREEZE IN point of the FRGD bus picture for the IN point when editing and using the RM-450. By turning this selector in the + direction (F, E...8), the timing of the FREEZE IN point is delayed. By turning this selector in the - direction (1, 2...7), the timing of the FREEZE IN point advances. The timing can be adjusted from the -7 to +8 fields at 1 field step.

This selector is factory-set to 0.

5 COMPOSITE/COMPONENT selector

Selects the format of the input signal used as FRGD bus input.

COMPOSITE: Select this position when using the signal which is supplied to one of the VIDEO IN 1/2/3 connectors as the input source.

COMPONENT: Select this position when using the signal which is supplied to the VIDEO IN (12-pin) connector as the input source (when using with the BVS-3200CP video switcher).

This selector is factory-set to COMPOSITE.

6 INT SYNC/EXT REF (internal sync/external reference) selector

Selects the reference signal for the system.

INT SYNC: Select this position when all the video units connected to the VIDEO IN connectors are capable of locking to the external sync signal.

EXT REF: When one or more connected video units are not capable of locking to the external synch signal, set the selector to this position.

Select one of the units (which has no external sync input connector) as the reference feeder, and feed the video signal output from that unit to the VIDEO IN 3 connector. In this case, this signal is output from the SYNC OUT connectors as the reference signal for the other units.

This selector is factory-set to INT SYNC.

• Notes

The DME-450P is designed so that the input signal to the VIDEO IN 3 connector will be also used as the external reference video signal when this selector is set to EXT REF. Thus, be sure to feed the video signal which is to be used as the reference video signal to the VIDEO IN 3 connector.

7 NOR/REV (normal/reverse) selector

To be set depending on the characters to be superimposed, when you press the TITLE button to superimpose the FRGD bus characters on the BKGD bus picture.

NOR: Select this position when the characters are white on the black background.

REV: Select this position when the characters are black on the white background.

This selector is factory-set to NOR.

8 KEY CLIP control

Adjusts the key level for the character signal when you press the TITLE button to superimpose the FRGD bus characters on the BKGD bus picture.

1-3. CONNECTIONS

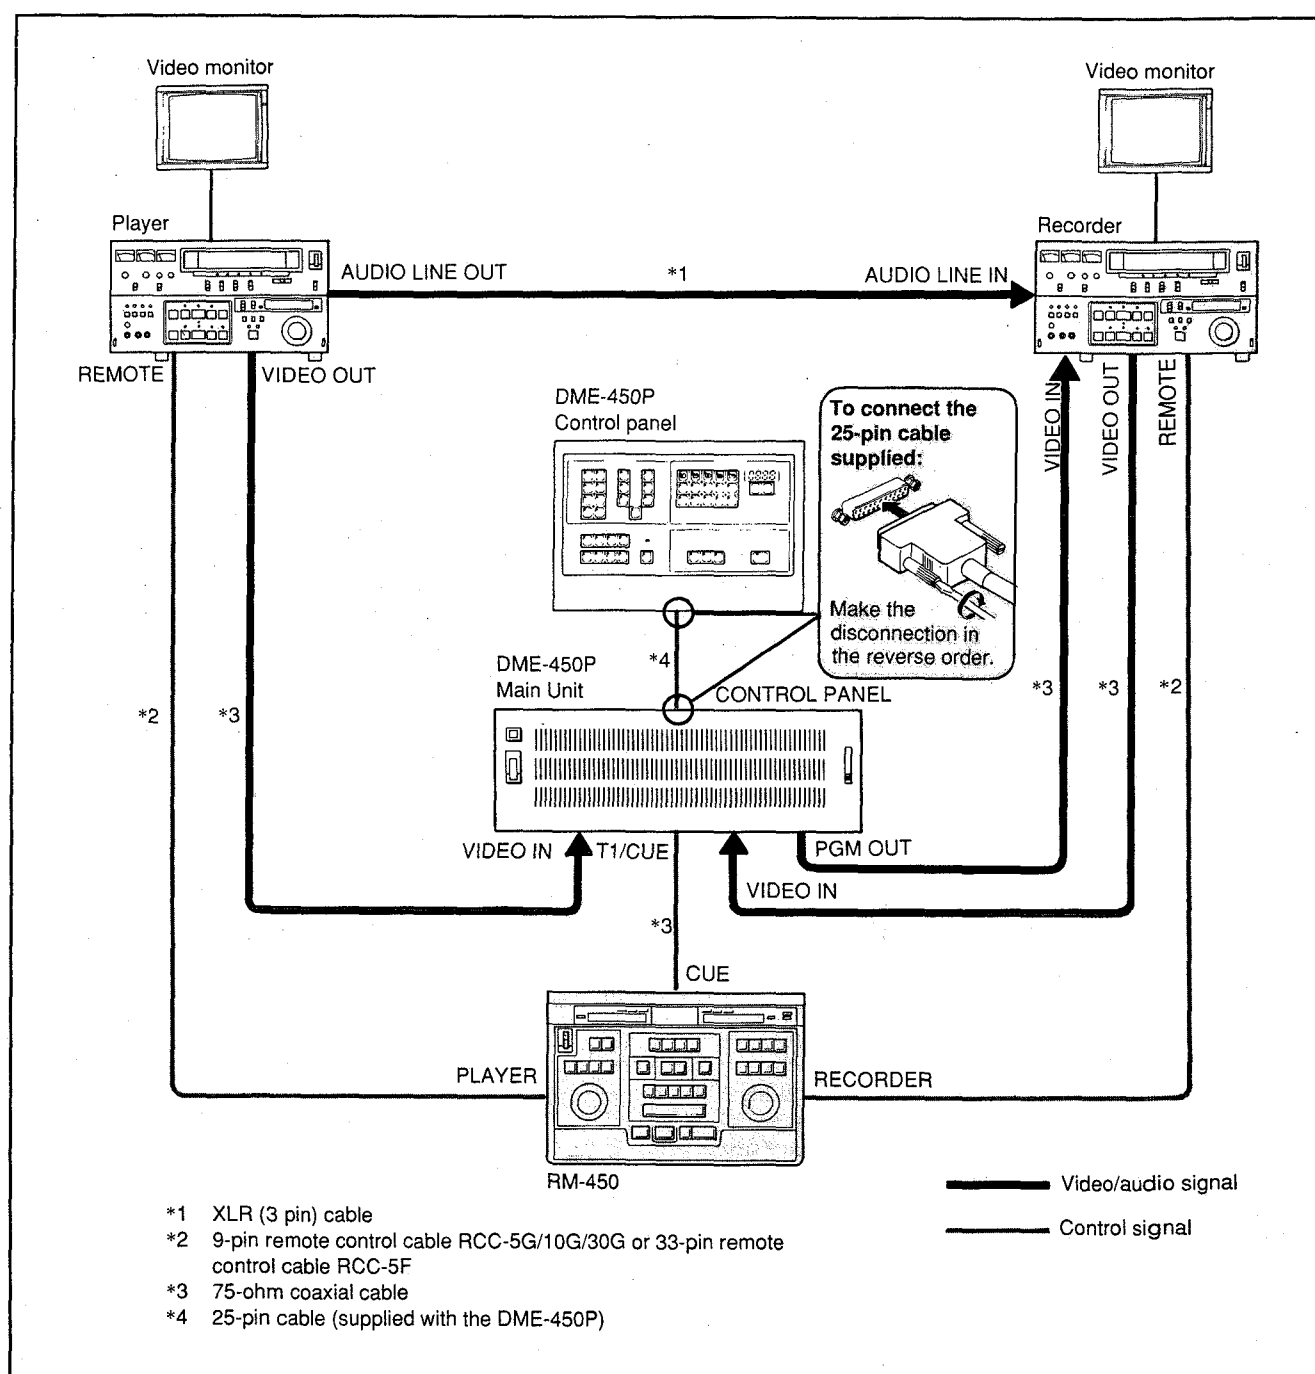

This section describes connections for the A roll editing system using two VCRs (one player and one recorder), the A/B roll editing system and the editing system using the

video switcher.

For the system connections for synchronizing, see "System connections for synchronizing" on page 1-14.

1-3-1. Two-VCR Editing System

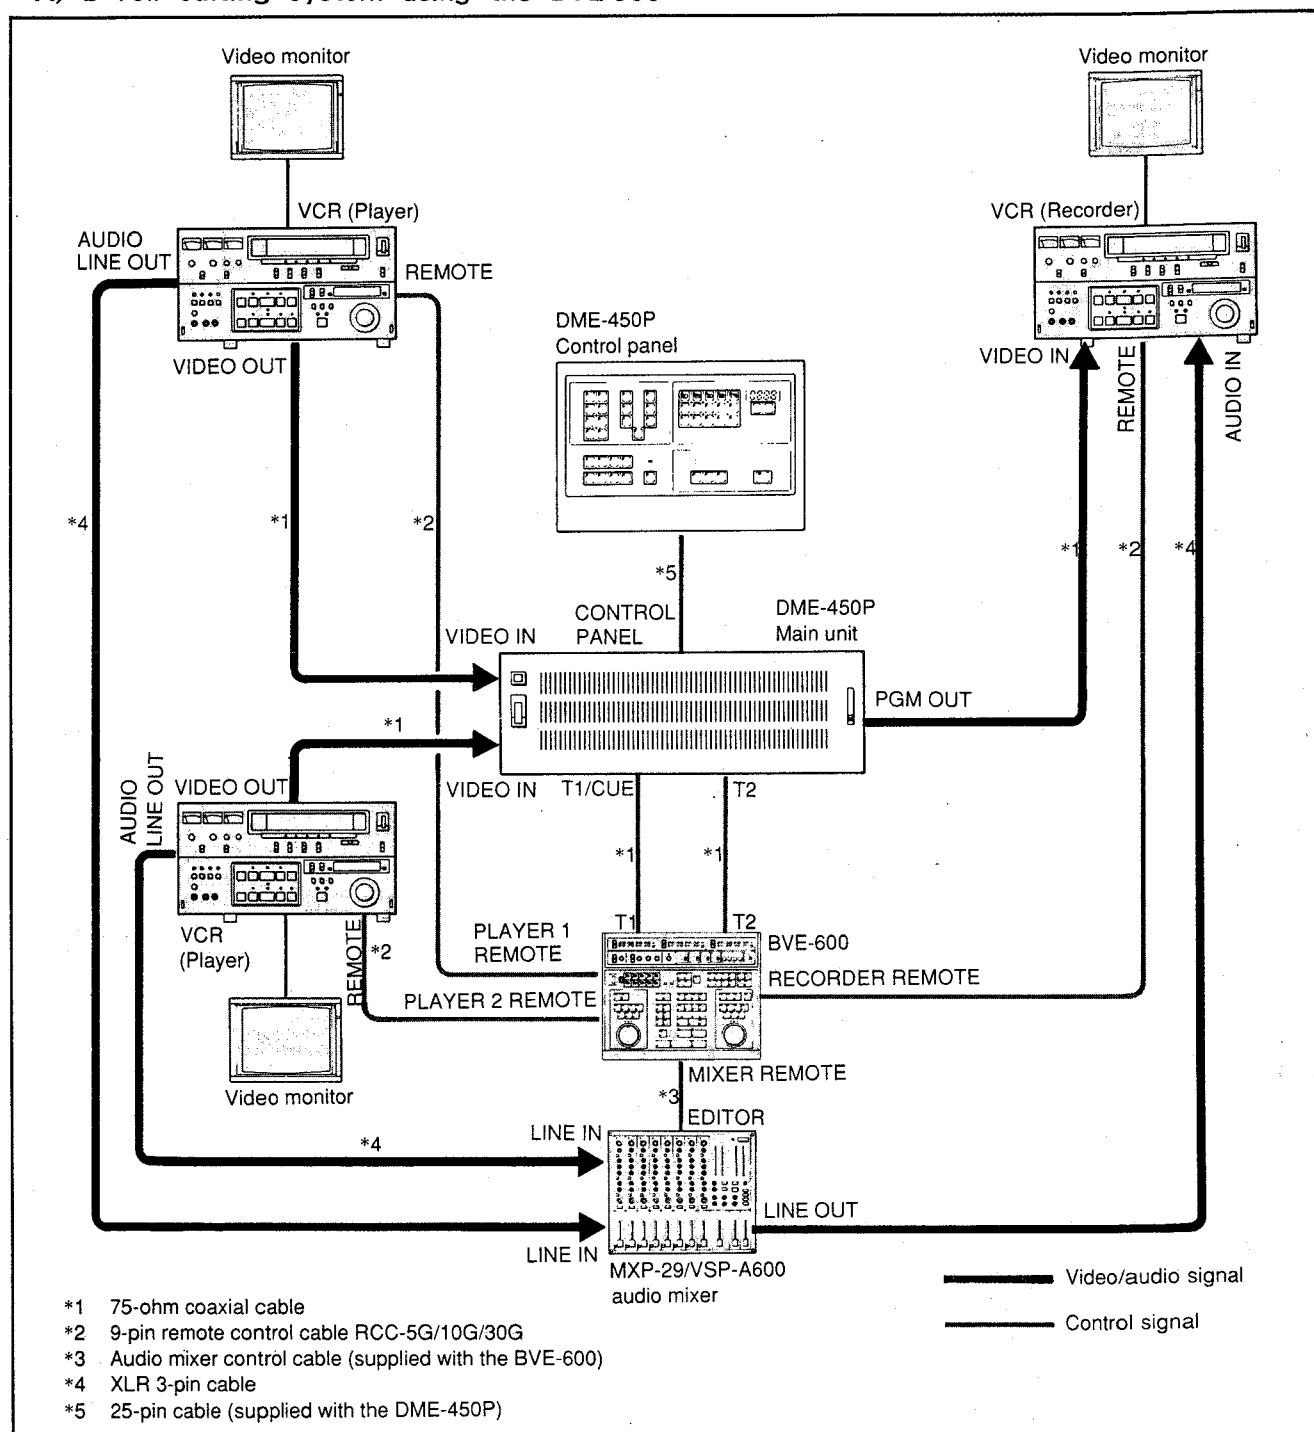

Using this unit with the RM-450 editing control unit allows the two-VCR editing system with one player and one recorder.

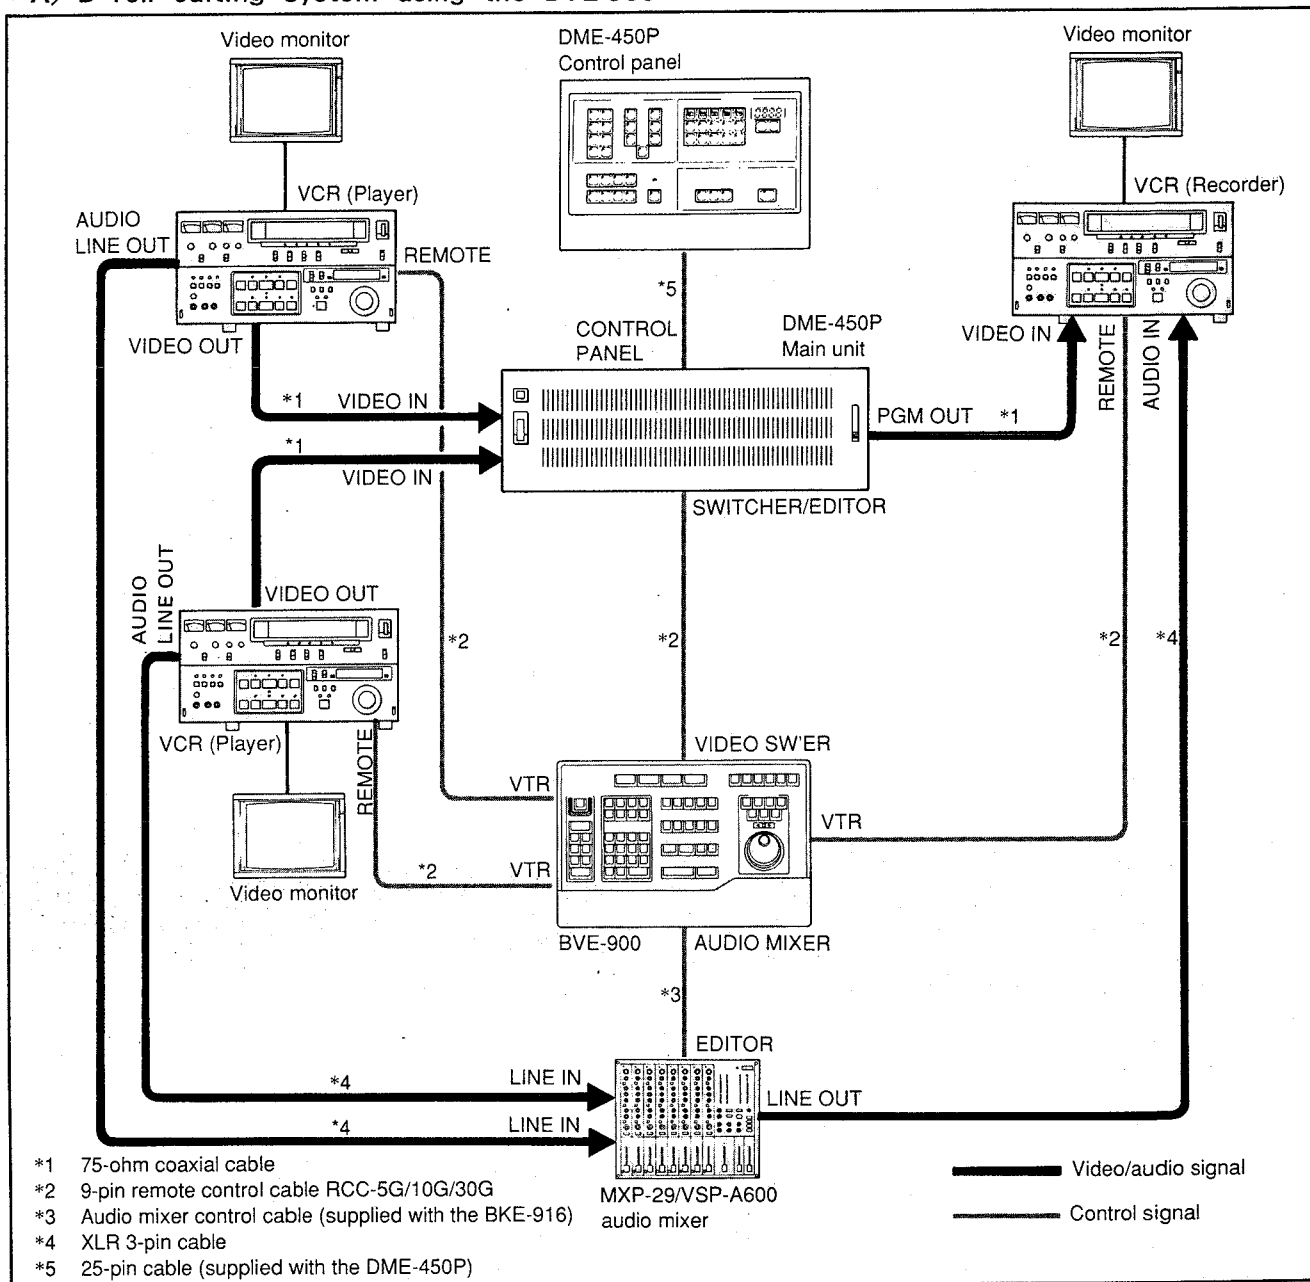

1-3-2. A/B Roll Editing System

Using this unit with the BVE-600/900 editing control unit allows an A/B roll editing system with two players and one recorder.

• A/B roll editing system using the BVE-600

• A/B roll editing system using the BVE-900

• Notes

The optional interface boards should be installed in the BVE-900 to connect the BVE-900, VCR, MXP-29 and DME-450P. For details, refer to the operation manual for the BVE-900.

A roll editing with the BVE-900

When editing using a BVE-900, and a player and a recorder with the DME-450P, disconnect the SWITCHER/EDITOR connector on the DME-450P and VIDEO SW'ER (9P)

connector on the BVE-900 in the above drawing and connect the T1/CUE and T2 connectors to the GPI-1 and GPI-2 connectors respectively.

• Note

You must set the FRGD FREEZE selector to IN (where the picture is frozen) when performing A roll editing using the BVE-900.

1-3-3. Editing System Using a BVS-3000 Series Video Switcher

When using with the BVS-3000 series video switcher, the DME-450P effects can be controlled by the BVS-3000 series video switcher.

• Note

- For connections with the BVS-3000 series video switcher, VCRs, and editors, see the operation manual for the BVS-3000 series video switcher.

- For connections to use the component video signal with the BVS-3200CP video switcher, see the operation manual for the BVS-3200CP video switcher.

1-3-4. System Connections for Synchronizing

In order to obtain the normal picture signals when editing, all the units in the system — VCRs, video camera, character generator, etc., should be synchronized with each other. As the reference sync signals, the three listed in the table at right are available.

The connection examples for these three reference sync signals are described below.

Reference sync signal generated by the DME-450P

All the video units connected to the DME-450P should be capable of locking to the external sync.

Reference video signal generated by a connected unit

The reference video signal is supplied to other units without passing through the DME-450P.

Video signal generated by the unit having no external sync input connector

When one of the video units connected to the DME-450P has no external sync input connectors, it must be used as the reference sync feeder. Input the video signal output from that unit to the VIDEO IN 3 connector and set the INT SYNC/EXT REF selector on the internal circuit board to EXT REF. In this case, the signal input to the VIDEO IN 3 is output from the SYNC OUT connectors as the reference sync signal for other units.

• Using the reference sync signal generated by the DME-450P

Two-VCR editing system using a player and a recorder

* Set INT SYNC/EXT REF selector on the AD-44P circuit board to INT SYNC.

A/B roll editing system

* Set the SYNC/EXT REF selector on the AD-44P circuit board INT SYNC.

- Using the reference video signal generated by a connected unit

Two-VCR editing system using a player and a recorder

A/B roll editing system

- **Notes**

In the above two connections, the COLOR BKGD signal generated by the DME-450P is not synchronized with the signal of another units. Thus, note that the COLOR BKGD signal cannot be used as the BKGD bus signal of the DME-450P.

- Using the video signal generated by the unit having no external sync input connector

Two-VCR editing system using a player and a recorder

VCR, video camera or character generator without external sync input connectors

* Set the INT SYNC/EXT REF selector on the AD-44P circuit board to EXT REF.

A/B roll editing system

VCR, video camera or character generator without external sync input connectors

* Set the INT SYNC/EXT REF selector on the AD-44P circuit board to EXT REF.

1-4. SETTING UP EXECUTE EFFECTS

This section introduces the basic operation before starting to edit.

This includes such things as input source selection, effect selection and transition speed selection.

1-4-1. Selecting the Input Source

Generally, the picture which will appear before an effect starts is the FRGD bus picture and the picture which will appear after an effect ends is the BKGD bus picture. However, for particular

digital multi-effects, only the BKGD bus picture will appear at the start and at the end of the effect. For details, see "Types of effects" on page 1-26.

The diagram shows a control panel with two columns of buttons. The left column is labeled '1' and the right column is labeled '2'. Above the buttons is a 'FRGD FREEZE' selector. Below the buttons is a 'TAKE' button. A digital display shows '0000'. A line points from the 'FRGD FREEZE' label to the selector. A line points from the '1' label to the first button in the left column. A line points from the '2' label to the first button in the right column. A line points from the 'TAKE' label to the 'TAKE' button.

1 Select the BKGD bus picture which will appear after an effect ends with the BKGD bus button. The pressed button lights.

When "BKGD" at the side of the BKGD bus buttons is lit, the input signal of the BKGD bus is output from the PGM OUT connector.

2 Select the FRGD bus picture which will appear before an effect starts with the FRGD bus button. The pressed button lights.

When "FRGD" at the side of the FRGD bus buttons is lit, the input signal of the FRGD bus is output from the PGM OUT connector.

• To monitor the picture of BKGD bus and FRGD bus

Either the BKGD bus or the FRGD bus signal picture is output from the PGM OUT connector. You can be sure which picture signal is output by the letters of the bus that are lit at the side of the bus buttons.

When FRGD is lit:

The input signal of the selected FRGD bus is output from the PGM OUT connector. You can be sure of the selected picture on the video monitor which is connected to the PGM OUT connector.

When BKGD is lit:

The input signal of the selected BKGD bus is output from the PGM OUT connector. You can be sure of the selected picture on the video monitor which is connected to the PGM OUT connector.

To change the picture viewed on the video monitor, press the TAKE button to make the letters of the bus desired—FRGD or BKGD—light up.

• To freeze the FRGD bus picture

When performing A/B roll editing using the BVE-600/900 series editing control unit, the FRGD bus picture can be frozen by setting the FRGD FREEZE selector to IN.

IN side of the FRGD FREEZE selector: to freeze the picture

OUT side of the FRGD FREEZE selector: not to freeze the picture

For two-VCR editing using the RM-450 editing control unit, the FRGD bus picture will be frozen regardless of the setting of this selector when an effect is performed.

1-4-2. Selecting the Effect

There are two ways to select the effect.

<p>Selecting the effect with the selection buttons for effects</p>	<p>Eleven effects (five WIPEs, MIX, CUT, FLIP, TUMBLE, SLIDE and SCROLL) can be selected directly by pressing the buttons.</p>
<p>Selecting the effect with the USER button</p>	<p>Pick out the patterns desired from the effect pattern list and designate them to the USER 1 through 4 buttons. We recommend that you designate the effects used frequently.</p>

• How to designate < Example > To designate the diamond pattern to the USER 1 button

<p>1 Look up the diamond pattern number by referring to the effect pattern list. You will find 23.</p>	<p>To clear a wrong number entered Press the C button while keeping the USER 1 button pressed. The effect number which was designated just before this will be left in the memory.</p>
<p>2 Designate 23 to the USER 1. There are two ways to designate.</p> <p>Way 1 While pressing the USER 1 button, press the 2 and 3 buttons. "0023" is indicated on the effect number indication display.</p> <p>Way 2 While pressing the USER 1 button, press the UP or DOWN button and release the USER 1 button when "0023" is indicated on the effect number indication display.</p>	<p>To change the designated effect Make another designation. The designation you have made will be stored in the memory and remains unchanged unless you make another designation, even when the power is turned off.</p>

1-4-3. Selecting the Background Color and Boder Color

When the COLOR BKGD button of the FRGD bus or BKGD bus button is pressed, the screen will be white, black or colored instead of the color of the picture. This is called color background.

By setting the BORDER ON/OFF button to ON (the lamp on the selector lights up), you can form a border on the pattern

edge and color the border.

By setting the BORDER ON/OFF button to OFF, you can select and adjust the background color.

The background and border colors are selected independently on the BKGD/BORDER COLOR adjustment section.

Background color

Bordered wipe pattern edge

• To select the background color

1 Select the COLOR BKGD with the BKGD or FRGD bus buttons.

The lamp on the pressed button lights up. To monitor the selected color, make sure that the letters of the bus (FRGD or BKGD) on which the COLOR BKGD has been selected lights up. When it does not light up, press the TAKE button to light it. (Selection is possible even if it is not lit, but the background color cannot be viewed on the video monitor connected to the PGM OUT connector.)

2 Make sure the BORDER ON/OFF lamp is not lit. When it is lit, press the BORDER ON/OFF button to extinguish the lamp.

3 Select the desired hue by using the buttons for HUE.

4 Select the desired chrominance level by using the three buttons for CHROMA.

H button: for high level
M button: for middle level
L button: for low level

5 Select the desired luminance level using the three buttons for LUM.

H button: for high level
M button: for middle level
L button: for low level

• To select the border color

	<p>1 Press the BORDER ON/OFF button to light the BORDER ON/OFF lamp.</p>
	<p>2 Select the desired hue by using the buttons for HUE.</p>
	<p>3 Select the desired chrominance level by using the three buttons for CHROMA. H button: for high level M button: for middle level L button: for low level</p>
	<p>4 Select the luminance level desired by using the three buttons for LUM. H button: for high level M button: for middle level L button: for low level</p>
<p>To view the selected border color on the video monitor Start the effect, such as a wipe, by pressing the TAKE button and check the border color.</p>	

1-4-4. Selecting the transition Duration

The period within which the FRGD bus picture is changed to the BKGD bus picture while using the effect is called the transition duration. The transition duration desired can be selected out of five choices.

Three buttons for the transition duration are provided. The following five selections are possible using three buttons.

When you press two buttons, press and hold one button down while pressing the other. The two button lamps light up.

1-5. BASIC EFFECT OPERATIONS

This section introduces the basic operation such as changing a picture by cut, mixing, wipe and digital multi-effects, and superimposing a title (characters) onto the BKGD picture.

1-5-1. Cut (Changing the Picture Instantaneously)

Cut is an effect instantaneously switching the FRGD bus picture to the BKGD bus picture.

Effect number indication display

FRGD bus picture (program picture)

BKGD bus picture (program picture)

Cut

BKGD bus picture

<p>1 Select the picture which will appear at the end of the effect by using the BKGD bus buttons.</p> <p>2 Select the picture which will appear at the start of the effect by using the FRGD bus buttons.</p> <p>3 Press the CUT button. The effect number indication display reads 1059 (effect number for cut).</p>	<p>4 Make sure that "FRGD" is lit. When it is not lit, press the TAKE button once to light it.</p> <p>5 Press the TAKE button The PGM OUT picture is switched from the FRGD bus picture to the BKGD bus picture at the end of the transition. ("FRGD" goes out and "BKGD" lights up.)</p>
--	---

1-5-2. Mix (Changing the Picture by Dissolving One Picture into Another)

Mix is a dissolve function which is made between the FRGD and BKGD bus pictures. The FRGD bus picture is gradually switched to the BKGD bus picture.

Effect number indication display

FRGD bus picture (program picture)

BKGD bus picture

Mix

<p>1 Select the BKGD bus picture which will appear at the end of the effect by using the BKGD bus buttons.</p> <p>2 Select the FRGD bus picture which will appear at the start of the effect by using the FRGD bus buttons.</p> <p>3 Press the MIX button. The effect number indication display will read 1080 (effect number for mix).</p> <p>4 Select the transition duration by using the buttons for TRANSITION SPEED.</p>	<p>5 Make sure that "FRGD" is lit. When it is not lit, press the TAKE button once to light it.</p> <p>6 Press the TAKE button to execute the effect. During the transition, the signal at the PGM OUT connector is switched from the FRGD bus picture to the BKGD bus picture. (Both "FRGD" and "BKGD" and the lamp on the TAKE button light up.) At the end of the transition, the BKGD bus signal is output from the PGM OUT connector. ("FRGD" and the lamp on the TAKE button go out and "BKGD" lights up.)</p>
--	---

1-5-3. Wipe (changing one picture to another as revealing the new picture)

Wipe is a function revealing the BKGD bus picture over the FRGD bus picture with a geometrical pattern moving across the screen. Five patterns can be selected by simply

pressing an effect selection button, and 156 patterns can be selected with the 4-digit effect number.

Effect number indication display

FRGD bus picture (program picture)

BKGD bus picture

Wipe

Bordered wipe pattern edge

BKGD bus picture (program picture)

<p>1 Select the BKGD bus picture which will appear at the end of the effect by using the BKGD bus button.</p>	<p>4 Add the border if necessary by pressing the BORDER ON/OFF button. The lamp on the BORDER ON/OFF button lights up.</p>
<p>2 Select the FRGD bus picture which will appear at the start of the effect by using the FRGD bus button.</p>	<p>5 Select the transition duration by using the TRANSITION SPEED buttons.</p>
<p>3 Select the desired wipe pattern. To select a wipe pattern with the effects selection buttons. Press one of five wipe pattern buttons:</p> <div style="display: flex; gap: 5px;"> <div style="border: 1px solid black; width: 15px; height: 15px;"></div> <div style="border: 1px solid black; width: 15px; height: 15px;"></div> <div style="border: 1px solid black; width: 15px; height: 15px;"></div> <div style="border: 1px solid black; width: 15px; height: 15px;"></div> <div style="border: 1px solid black; width: 15px; height: 15px;"></div> </div> <p>The effect number indication display will read the 4-digit effect number.</p> <p>To select a wipe pattern with a pattern code</p> <p>Press one of the USER 1 to 4 buttons. To designate the effect number to USER 1 to 4 buttons, refer to "Selecting the effect with the USER button" on page 1-17.</p>	<p>6 Make sure that "FRGD" is lit. When it is not lit, press the TAKE button to light it.</p>
	<p>7 Press the TAKE button to execute the effect. During the transition, the signal at the PGM OUT connector is changed from the FRGD bus picture to the BKGD bus picture. (Both "FRGD" and "BKGD" and the lamp on the TAKE button light up.) At the end of the transition, the BKGD bus signal is output from the PGM OUT connector. ("FRGD" and the lamp on the TAKE button go out and "BKGD" lights up.)</p>

1-5-4. Digital Multi-effects

Digital multi-effects (DME), unlike mix or wipe, manipulate the geometry of the pictures involved. A DME alters the geometry of the picture itself — e.g. size, shape, rotation, etc. This is achieved by digitizing the signal and storing it in

the local memory. Four preassigned DME patterns can be selected by simply pressing effects selection buttons, and 117 DME patterns can be selected through designations to the USER 1 through 4 buttons.

• Preassigned DME patterns

Four standard DME patterns (flip, tumble, slide and scroll) can be selected by pressing the effects selection buttons.

• Flip and Tumble

Flip and tumble are DME patterns to reduce a FRGD bus picture and to expand a BKGD bus picture in the direction of height or width.

- The blank screen area can be colored by using the color background function.

Flip

Tumble

Background color

• Slide and Scroll

The FRGD bus picture itself moves in the direction of the transition, as if it is pulled to the right, or up, thus revealing the BKGD bus picture behind it.

Slide

Scroll

• Optional DME patterns

117 DME patterns are available. The typical DME patterns are shown below: mosaic, picture in picture, rotation, mirror, etc. For the remaining DME patterns, refer to "Effect pattern list" on pages 1-35 to 48.

Mirror

Mosaic

Rotation

Picture in picture

• Types of effects

The effects can be divided into six types and depend on the effected bus and the transition duration.

Transition process Type	Effected bus	Transition duration
1	FRGD	Variable
2	BKGD	Variable
3	FRGD and BKGD	Variable
4	FRGD	Fixed
5	BKGD	Fixed
6	FRGD and BKGD	Fixed

Type	Effect No.
1	1 to 681 (98 patterns), 1200 to 1816 (66 patterns)
2	1001, 1002, 1030 to 1042 (9 patterns)
3	1000, 1003, 1006, 1080, 1900 to 1954 (16 patterns)
4	700 to 817 (63 patterns), 1059
5	1020 to 1026 (6 patterns), 1060 to 1071 (6 patterns)
6	1082 to 1125 (13 patterns)

• Notes

- As for effects 516 to 681 of type 1, three kinds of transition durations are available instead of five. Namely, the transition duration when pressing the SLOW button and the transition duration when pressing the SLOW and MID buttons are the same. Also, the transition duration when pressing MID and the one when pressing MID and FAST buttons are the same.
- As for effects 700 to 817 of type 4, their transition duration is the same. But the fluctuating state of matrix is different, depending on selection of the transition duration.

• Operation of DME

1 **Types 1, 3 and 4:** Select the pictures which will appear at the end and at the start of the effect by using the BKGD bus and FRGD bus buttons respectively.

Types 2 and 5: Select the BKGD bus picture by using the BKGD bus button.

Type 6: Select the FRGD and BKGD bus pictures by using the FRGD and BKGD bus buttons.

2 **Select the desired digital effect pattern and press that button.**
To select a digital effect other than the standard four DME patterns, refer to "Selecting the effect with the USER button" on page 1-17.

3 **Add the border if necessary by pressing the BORDER ON/OFF button.**
The lamp on the BORDER ON/OFF button lights up.

4 **Select the desired transition duration by using buttons for TRANSITION SPEED.**

5 **Execution of the effect**
Types 1, 3 and 4

1 "FRGD" must be lit. When it is not lit, press the TAKE button to light it.

2 Press the TAKE button to execute the effect. During the transition, the signal at the PGM OUT connector is changed from the FRGD bus signal to the BKGD bus signal. ("FRGD" and "BKGD" and the lamp on the TAKE button light up.) At the end of the transition, the BKGD bus signal is output from the PGM OUT connector. ("FRGD" and the lamp on the TAKE button go out, and "BKGD" lights up.)

Types 2, 5 and 6

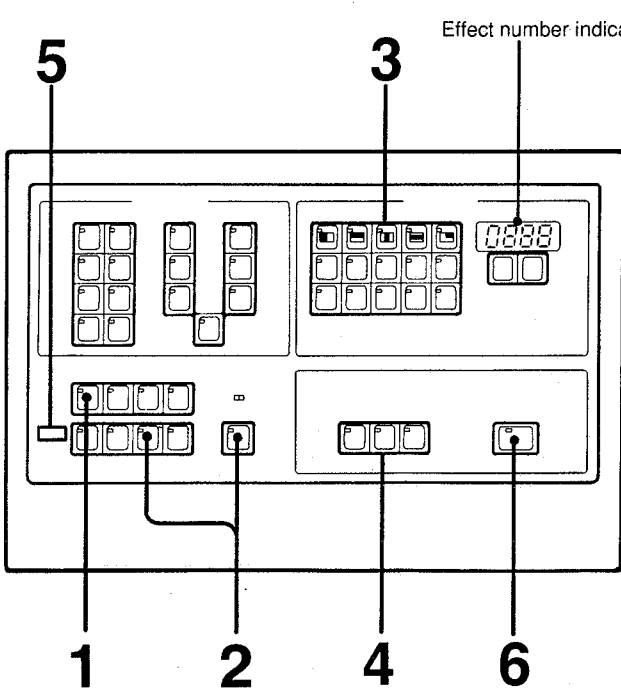

Press the TAKE button.

The effect is executed immediately. The execution of the effect is being continued and the lamp on the TAKE button is lit until the TAKE button is pressed again. To stop the effect execution, press the TAKE button again.

1-5-5. Superimposing the title

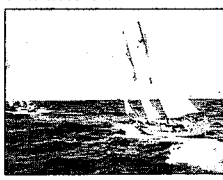

The characters for which an effect has been made can be superimposed on the BKGD bus picture.

The character generator, video camera and so on can be connected to one of the VIDEO IN connectors as the signal source for the characters. The characters for which an effect such as rotation, slide and so on has been made can be inserted.

Effect number indication display

BKGD bus picture
(Picture in which the characters are to be inserted)

FRGD bus picture
(Characters to be inserted)

BKGD bus picture

1 Select the desired BKGD bus picture in which the characters are to be inserted by using the BKGD bus button.

2 While pressing the FRGD bus button which corresponds to the character signal, press the TITLE button.
The lamp on the TITLE button lights up.

• Note

When the character picture signal is the component video signal, this component video signal is input directly to the FRGD bus from the VIDEO IN connector (12 pin) (when editing and using with BVS-3200CP). In this case, the video signal input to VIDEO 1/2/3 connectors cannot be selected by using the FRGD bus button. However, to use the component video signal as the character picture, press the TITLE button while holding down one of FRGD bus buttons.

3 Select the desired effect.
The effect number will be indicated on the effect number indication display.

• Note

When selecting the effect type that only the BKGD bus picture is effected, characters cannot be inserted. (Refer to page 1-26.)

4 Select the transition duration by using the buttons for TRANSITION SPEED.

<p>5 Make sure that "FRGD" is lit. If it is not lit, press the TAKE button to light it. When it is lit, the FRGD bus characters are inserted in the BKGD bus picture. Now the effect is ready to start.</p>	<p>To deactivate the title superimposing function Press the TITLE button so that the lamp on the TITLE button will go out.</p>
<p>6 Press the TAKE button to execute the effect. FRGD bus characters on the BKGD bus picture changes depending on the selected effect.</p>	

• **Setting the NOR/REV selector**

Set the NOR/REV selector according to the black or white characters to be superimposed.

Set to NOR when the characters are white on the black background.

Set to REV when the characters are black on the white background.

• **Adjustment the key level for the character signal**

Adjust the key level for the character signal with the KEY CLIP control on the internal circuit board so that the inserted characters will be clear.

1-6. USING THE DME-450P WITH AN EDITING CONTROL UNIT

The RM-450, BVE-600 or BVE-900 editing control unit can be connected to the DME-450P. Also, the DME-450P can be a combination switcher when it is used together with a BVS-3000 series video switcher.

• Interface

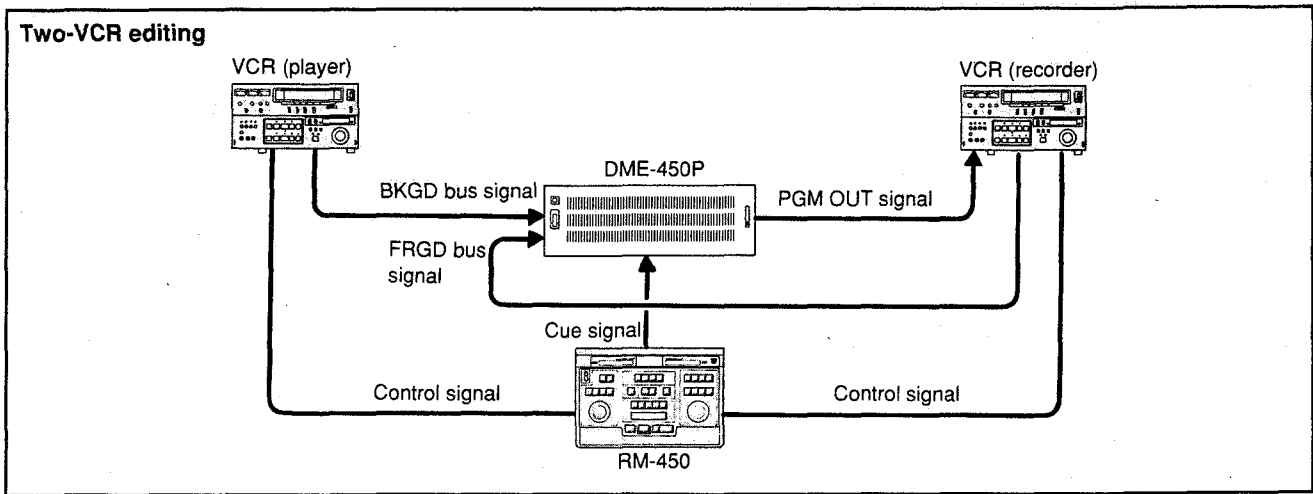

The interface and controllable functions for each editing control unit are listed below.

Editing control unit	Interface	Controllable functions
RM-450	CUE	Execution of the effect
BVE-600	T1 and T2	Execution of the effect
BVE-900	9-pin serial interface	<ul style="list-style-type: none">• Execution of the effect• Selection of FRGD bus and BKGD bus• Selection of the effect• Selection of the transition duration
BVS-3100P/3200P/3200CP	9-pin serial interface	All the functions except for those of the FRGD FREEZ selector and TITLE button

- Be sure to set the RM-450/BVE-600/BVE-900/BVS-3000 series unit selector to the appropriate position in accordance with the connected unit. (Refer to page 1-9.)
- For connections to units, refer to page 1-10 to 1-15.
- For operations of the connected unit, refer to the instruction manual of the unit.

1-6-1. Editing Using an RM-450 Editing Control Unit

By using the DME-450P with the RM-450, electronic editing with special effects can be carried out using two VCRs: a player and a recorder.

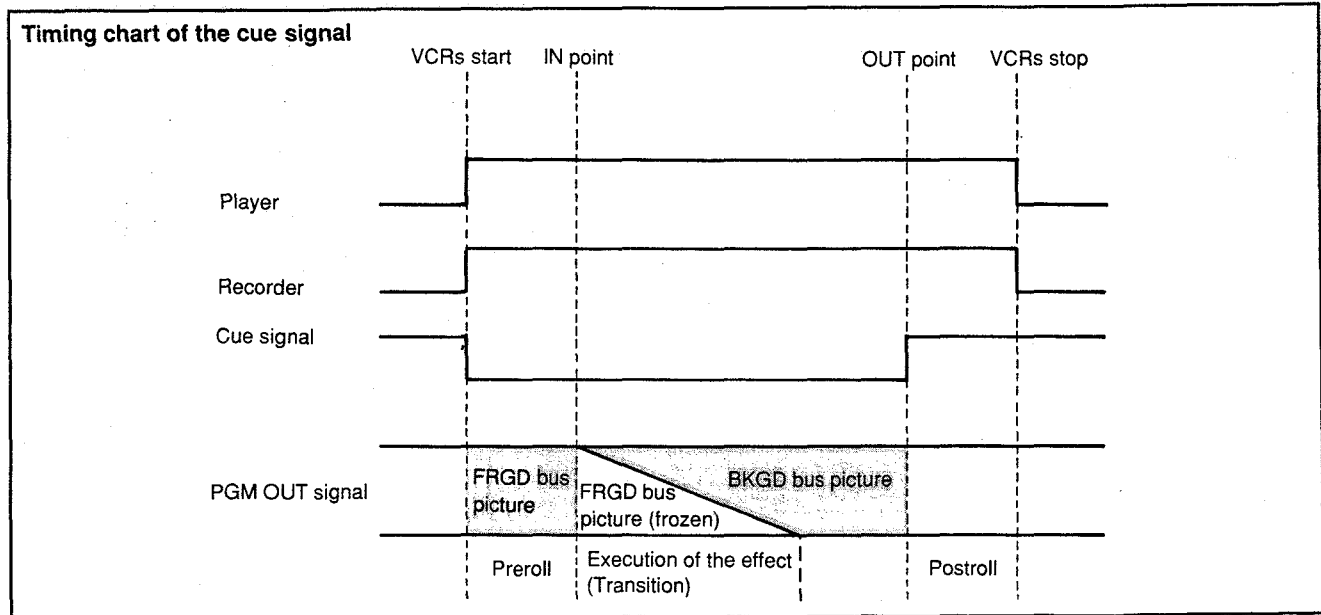

• Cue signal

The DME-450P is controlled by the cue signal sent from the RM-450. The preroll time must be set to five or seven seconds and the time to send the cue signal must be set to three seconds before the IN point on the RM-450. When starting to edit, the recorder and the player are prerolled five or seven seconds before the IN point. At the IN point, the picture from the recorder (FRGD bus picture) is frozen and the effect is started. At the same time, the recorder starts recording.

• Note

When editing by using the DME-450P with the RM-440, set the preroll time to five seconds on the RM-440. (The cue signal will be sent five seconds before the IN point.)

• Two-VCR editing

Preparation

Set the RM-450 as follows.

Set the PREROLL selector on RM-450 (preroll time) to five or seven seconds. Set the SYSTEM PRESET switches so that the cue signal will be sent three seconds before the IN point. Note that only the above preroll time and the cue signal out timing allow you to execute the correct editing.

Operations on the DME-450P

- 1** Select the picture for the recorder with the FRGD bus button and the picture for the player with the BKGD bus button.
- 2** Select the effect.
- 3** Select the transition duration by using the buttons for TRANSITION SPEED.

Operations on the RM-450

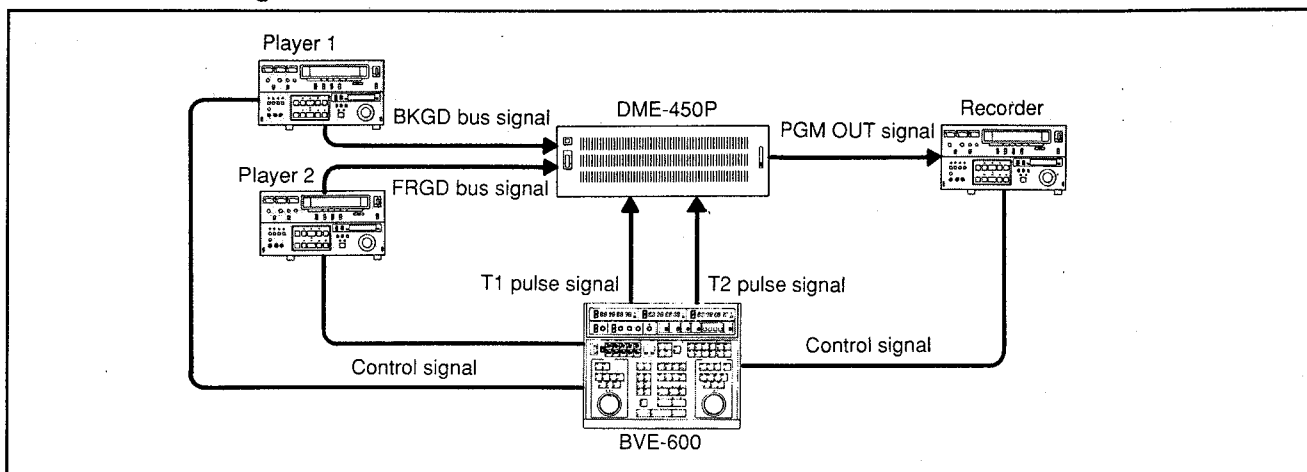

- 4** Set the IN point and the OUT point of the BKGD bus picture on the PLAYER side.
- 5** Set the IN point of the FRGD bus picture on the RECORDER side.
- 6** Press the PREVIEW button to monitor the picture on which the effect is to be made before executing the effect, if required.
- 7** Press the AUTO EDIT/END button to execute the effect.

1-6-2. Control from a BVE-600 Editing Control Unit

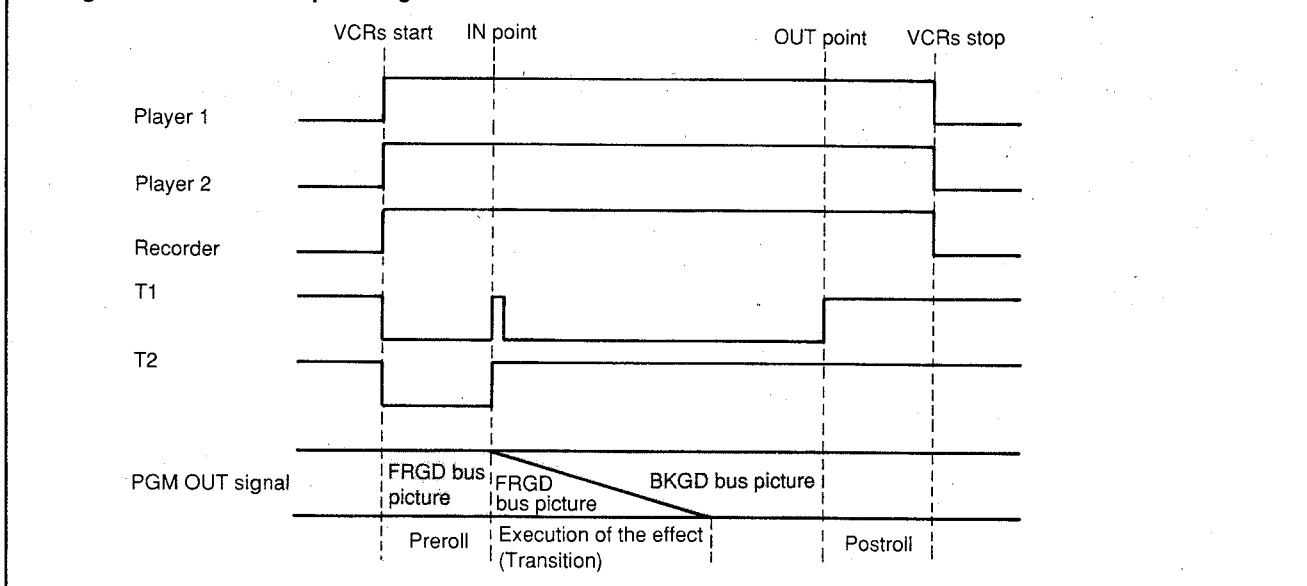

Using this unit with the BVE-600 editing control unit allows A/B roll editing with two players and one recorder.

The execution of the effect selected on the DME-450P can be controlled from the BVE-600, with the T1 and T2 pulse signals.

• A/B roll editing

Timing chart of T1 and T2 pulse signals

Notes on operating the BVE-600

- For A/B roll editing with the BVE-600, set the duration of the A roll to 0 (namely, do not designate the OUT point of the A roll, so that the effect starts immediately from the IN point). Also, set the FRGD FREEZE selector on the DME-450P to OUT (not frozen).
- For A roll editing with the BVE-600, set the FRGD FREEZE selector on the DME-450P to IN (frozen).

1-6-3. Control from a BVE-900 Editing Control Unit

Using this unit with the BVE-900 editing control unit allows A/B roll editing.

• Data setting

When editing using with the BVE-900, the crosspoint, effect number and transition duration can be selected on the BVE-900. Set the crosspoint, effect number and transition duration on the BVE-900 as follows:

Selection of the crosspoint

Selection of the effects

You can select the effect by using the effect numbers of the DME-450P. Set the effect number, referring to "Effect pattern list" on pages 1-35 to 1-48.

Selection of the transition duration

The transition durations which have been set on the BVE-900 are read out on the DME-450P as follows:

Setting value on the BVE-900	Setting value on the DME-450P and indication	
0 to 19 frames	13 frames	FAST lights up.
20 to 25 frames	20 frames	FAST/MID light up.
26 to 39 frames	26 frames	MID lights up.
40 to 79 frames	40 frames	SLOW/MID light up.
80 frames and over	80 frames	SLOW lights up.

• Notes on the editing points

- For A/B roll editing with the use of the BVE-900, set the duration of the A roll to 0 (namely, do not designate the OUT point of the A roll, so that the effect starts immediately from the IN point).
- To select whether or not to freeze the FRGD bus picture, use the FRGD FREEZE selector on the DME-450P (refer to page 1-3.)

1-6-4. Control from a BVE-3000 Series Video Switcher

When using with the BVS-3000 series video switcher, the followings can be controlled from the BVS-3000 series video switcher.

- Digital multi-effects of the DME-450P can be added to the effects of the BVS-3000 series video switcher.
- All the functions of the controls and buttons except for those of the FRGD FREEZE selector and TITLE button on the control panel can be controlled from the BVS-3000 series video switcher through the 9-pin serial interface.
- When selecting the effect with the effect number "1100", the execution of the effect can be controlled manually with the fader lever and positioner on the BVS-3000 series video switcher.

For details, refer to the operation manual for the BVS-3000 series video switcher.

Color video monitor PVM series

SECTION 2

SERVICE INFORMATION

2-1. REMOVAL OF CABINET

Console Unit

- Remove the seven screws shown in the figure.
- Disconnect the connector 5 shown in the figure. Then remove the Upper Panel from the Bottom Panel.

2-2. PRINTED CIRCUIT BOARD

Circuit information is provided below.

BOARD	FUNCTION
AD-44P	A/D Converter
DA-33P	D/A Converter
MY-41P	Memory Board
SY-146P	System Control Board
PU-69	Process Board
KY-163	Function Keyboard
MB-249	Mother Board
LE-55	Power Indicator
CN-231	Connector Board

2-3. LOCATION OF PRINTED CIRCUIT BOARDS

2-4. USING THE DME-450P WITH AN EDITING CONTROL UNIT

The RM-450, BVE-600 or BVE-900 editing control unit can be connected to the DME-450P. Also, the DME-450P can be a combination switcher when it is used together with a BVS-3000 series video switcher.

• Interface

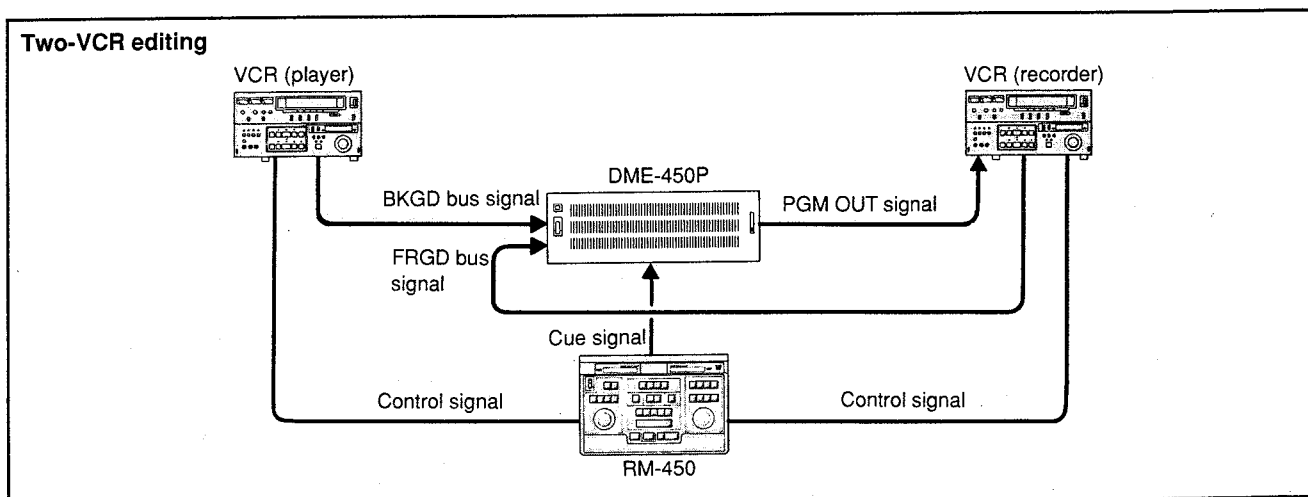

The interface and controllable functions for each editing control unit are listed below.

Editing control unit	Interface	Controllable functions
RM-450	CUE	Execution of the effect
BVE-600	T1 and T2	Execution of the effect
BVE-900	9-pin serial interface	<ul style="list-style-type: none">• Execution of the effect• Selection of FRGD bus and BKGD bus• Selection of the effect• Selection of the transition duration
BVS-3100P/3200P/3200CP	9-pin serial interface	All the functions except for those of the FRGD FREEZ selector and TITLE button

- Be sure to set the RM-450/BVE-600/BVE-900/BVS-3000 series unit selector to the appropriate position in accordance with the connected unit. (Refer to page 1-9.)
- For connections to units, refer to page 1-10 to 1-15.
- For operations of the connected unit, refer to the instruction manual of the unit.

2-4-1. Editing Using an RM-450 Editing Control Unit

By using the DME-450P with the RM-450, electronic editing with special effects can be carried out using two VCRs: a player and a recorder.

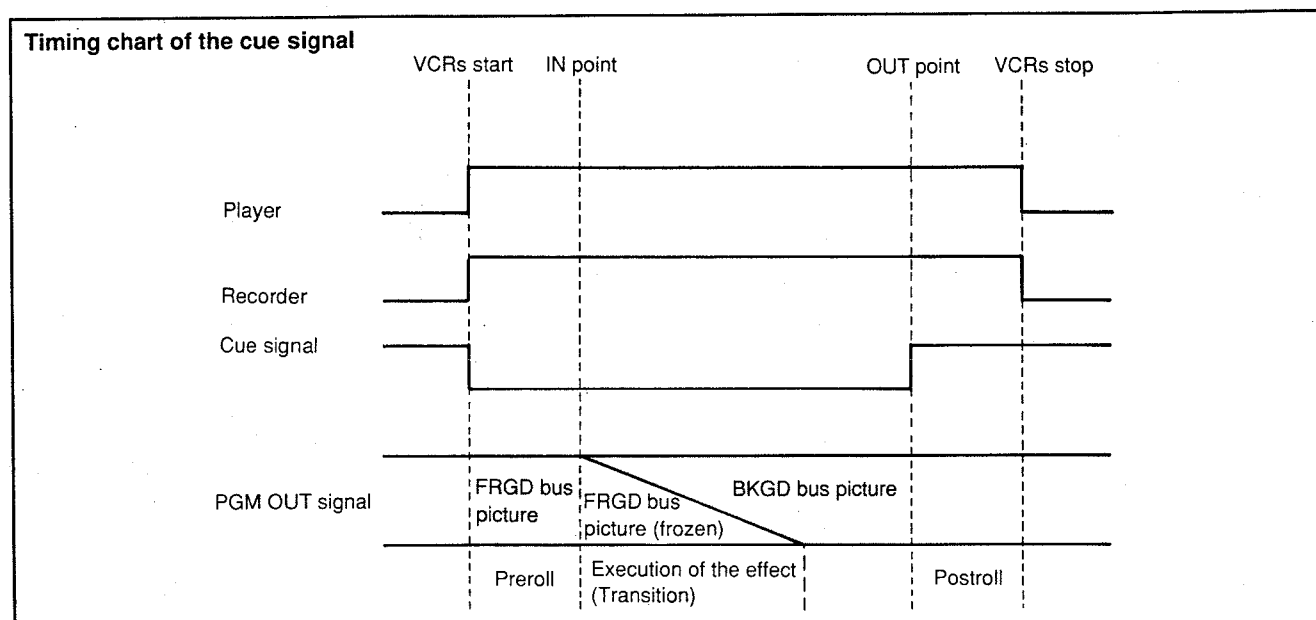

• Cue signal

The DME-450P is controlled by the cue signal sent from the RM-450. The preroll time must be set to five or seven seconds and the time to send the cue signal must be set to three seconds before the IN point on the RM-450. When starting to edit, the recorder and the player are prerolled five or seven seconds before the IN point. At the IN point, the picture from the recorder (FRGD bus picture) is frozen and the effect is started. At the same time, the recorder starts recording.

• Note

When editing by using the DME-450P with the RM-440, set the preroll time to five seconds on the RM-440. (The cue signal will be sent five seconds before the IN point.)

• Tow-VCR editing

Preparation

Set the RM-450 as follows.

Set the PREROLL selector on RM-450 (preroll time) to five or seven seconds. Set the SYSTEM PRESET switches so that the cue signal will be sent three seconds before the IN point. Note that only the above preroll time and the cue signal out timing allow you to execute the correct editing.

Operations on the DME-450P

- 1** Select the picture for the recorder with the FRGD bus button and the picture for the player with the BKGD bus button.
- 2** Select the effect.
- 3** Select the transition duration by using the buttons for TRANSITION SPEED.

Operations on the RM-450

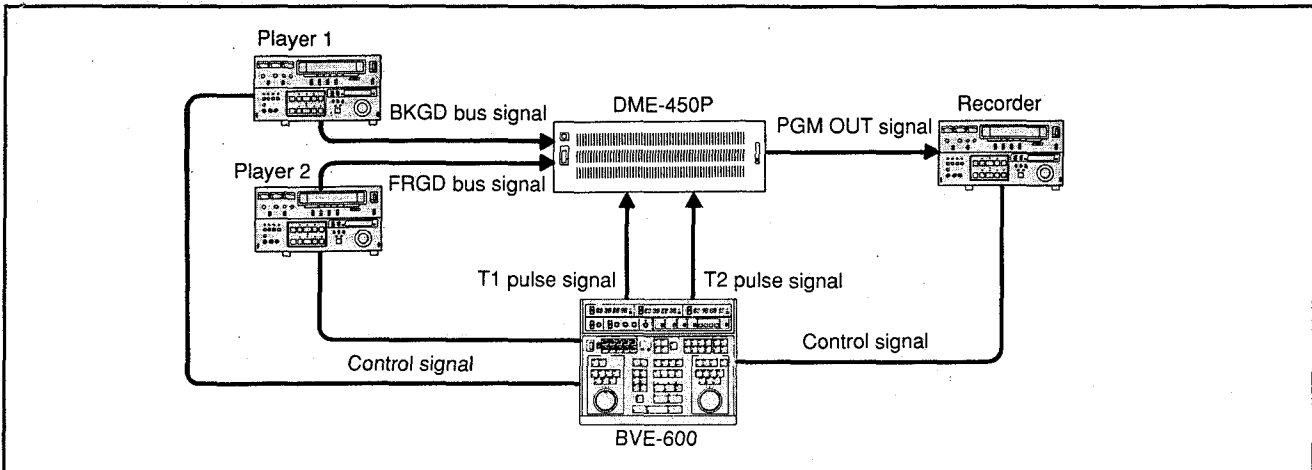

- 4** Set the IN point and the OUT point of the BKGD bus picture on the PLAYER side.
- 5** Set the IN point of the FRGD bus picture on the RECORDER side.
- 6** Press the PREVIEW button to monitor the picture on which the effect is to be made before executing the effect, if required.
- 7** Press the AUTO EDIT/END button to execute the effect.

2-4-2. Control from a BVE-600 Editing Control Unit

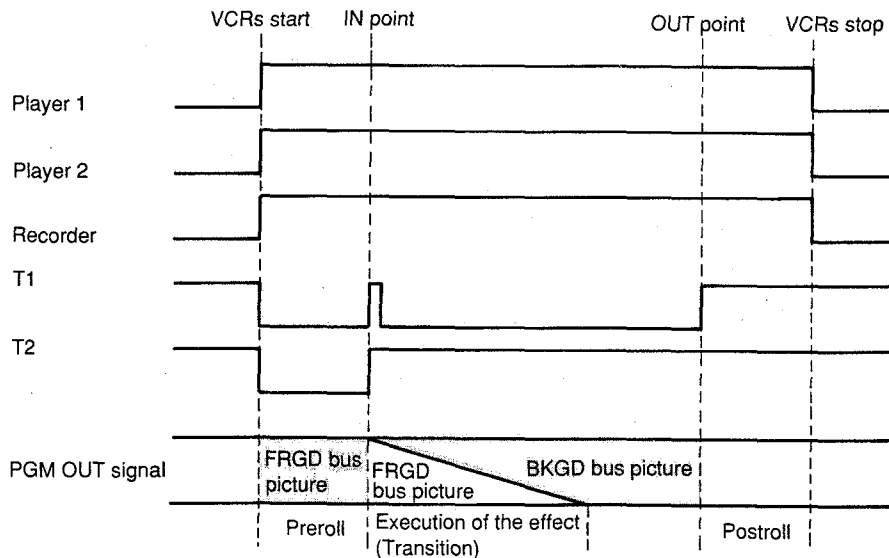

Using this unit with the BVE-600 editing control unit allows A/B roll editing with two players and one recorder.

The execution of the effect selected on the DME-450P can be controlled from the BVE-600, with the T1 and T2 pulse signals.

• A/B roll editing

Timing chart of T1 and T2 pulse signals

Notes on operating the BVE-600

- For A/B roll editing with the BVE-600, set the duration of the A roll to 0 (namely, do not designate the OUT point of the A roll, so that the effect starts immediately from the IN point). Also, set the FRGD FREEZE selector on the DME-450P to OUT (not frozen).

- For A roll editing with the BVE-600, set the FRGD FREEZE selector on the DME-450P to IN (frozen).

2-4-3. Control from a BVE-900 Editing Control Unit

Using this unit with the BVE-900 editing control unit allows A/B roll editing.

• Data setting

When editing using with the BVE-900, the crosspoint, effect number and transition duration can be selected on the BVE-900. Set the crosspoint, effect number and transition duration on the BVE-900 as follows:

Selection of the crosspoint

Selection of the effects

You can select the effect by using the effect numbers of the DME-450P. Set the effect number, referring to "Effect pattern list" on pages 1-35 to 1-48.

Selection of the transition duration

The transition durations which have been set on the BVE-900 are read out on the DME-450P as follows:

Setting value on the BVE-900	Setting value on the DME-450P and indication	
0 to 19 frames	13 frames	FAST lights up.
20 to 25 frames	20 frames	FAST/MID light up.
26 to 39 frames	26 frames	MID lights up.
40 to 79 frames	40 frames	SLOW/MID light up.
80 frames and over	80 frames	SLOW lights up.

• Notes on the editing points

- For A/B roll editing with the use of the BVE-900, set the duration of the A roll to 0 (namely, do not designate the OUT point of the A roll, so that the effect starts immediately from the IN point).
- To select whether or not to freeze the FRGD bus picture, use the FRGD FREEZE selector on the DME-450P (refer to page 1-3.)

2-4-4. Control from a BVS-3000 Series Video Switcher

When using with the BVS-3000 series video switcher, the followings can be controlled from the BVS-3000 series video switcher.

- Digital multi-effects of the DME-450P can be added to the effects of the BVS-3000 series video switcher.
- All the functions of the controls and buttons except for those of the FRGD FREEZE selector and TITLE button on the control panel can be controlled from the BVS-3000 series video switcher through the 9-pin serial interface.
- When selecting the effect with the effect number "1100", the execution of the effect can be controlled manually with the fader lever and positioner on the BVS-3000 series video switcher.

For details, refer to the operation manual for the BVS-3000 series video switcher.

2-5. CONNECTION CONNECTOR

When external cables are connected to the various connectors on the connector panel during maintenance, the hardware listed below (or equivalents) should be used.

Panel Indication	Connection Connector
COMPONENT VIDEO IN (BVS-3200C)	1-562-159-00 Plug, 12 (F)
COMPONENT VIDEO OUT (BVS-3200C)	1-560-995-00 Plug, 12 (M)

2-7. SPARE PARTS

(1)

The shaded and Δ -marked components are critical to safety. Replace only with same components as specified.

- (2) Replacement Parts supplied from the Sony Parts Center will sometimes have a different shape from the original parts. This is due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts". This manual's exploded views and electrical spare parts list indicate the part numbers of "the standardized genuine parts at the present". Regarding engineering part changes in out engineering department, refer to Sony service bulletins and service manual supplements.
- (3) The parts marked with "s" in the SP column of the exploded views and electrical spare parts list are normally stocked for replacement purposes. The parts marked with "o" in the SP column are not normally required for routine service work. Orders for parts marked with "o" will be processed, but allow for additional delivery time.

2-8. FIXTURE

The following is available for the alignment of the DME-450P.

Part No.	Description
J-6180-960-A	Extension Board for DME-450P

SECTION 3

ELECTRICAL ALIGNMENT

[Required Equipment]

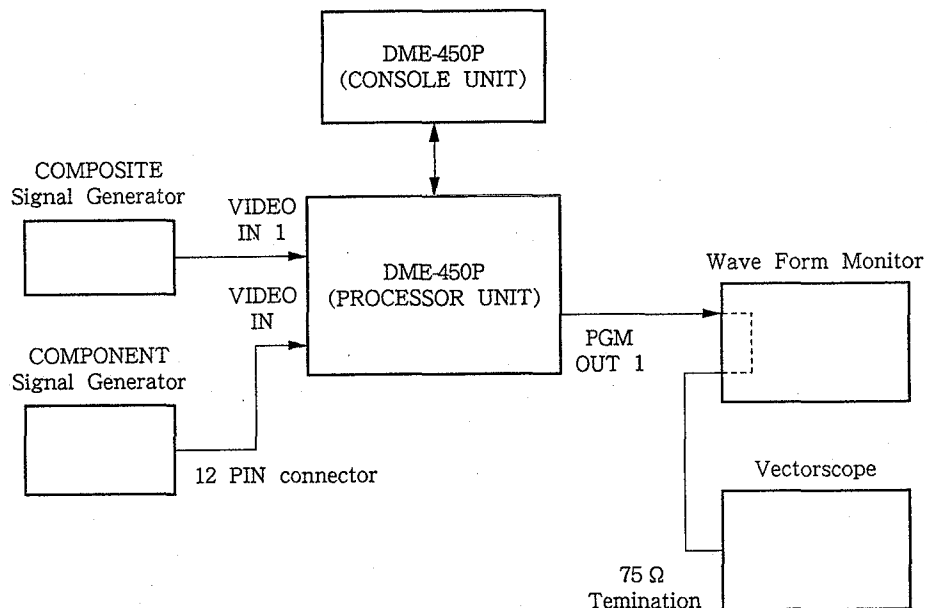

- Oscilloscope
- NTSC COMPOSITE Signal Generator
: TEKTRONIX 1411 or equivalents
- NTSC COMPONENT Signal Generator
: TEKTRONIX TSG-300 or equivalents
- Vectorscope
: TEKTRONIX 521 or equivalents
- NTSC Waveform Monitor
: TEKTRONIX 1485 or equivalents
- Frequency Counter
- Digital Voltage Meter

[CONNECTION]

There are three VIDEO IN connectors, (VIDEO IN 1, 2 and 3).

The VIDEO IN 1 should be used unless otherwise specified.

Set the select switches (on the console unit) of "BKGD BUS" and "FRGD BUS" to "1".

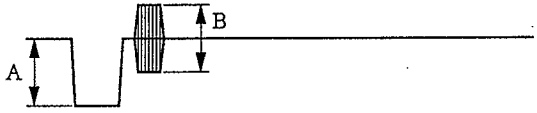

3-1. AD-44P BOARD ALIGNMENT

3-2-30. B-Y Level Adjustment (COMPONENT Mode)

machine conditions for adjustment	specifications	adjustments
<ul style="list-style-type: none"> • VIDEO IN (12 PIN CONNECTOR) : 100/0/100/0 Luminance 700mV CHROMINANCE ± 350mV • S1/AD-44P (H-10) : COMPONENT IN 	CH1 : CN12-8A/DA-33P (K-10)* ¹ TP39/DA-33P (J-4)* ²  $A = 0.70 \pm 0.02V$	⚙ RV27/DA-33P (H-3)* ¹ (H-4)* ² TRIG : CH1

3-3. DIGITAL BLOCK ALIGNMENT

3-3-1. Settings for the Type of Connected Editors

The value of this switch is only read by the CPU after the power is turned on. Be sure to turn the power off and then on again after setting this switch.

Adjustment points: Switch S2 on the SY-146P board.

S2 is set to RM-450, BVE-600, BVE-900 or BVS-3000 SERIES. Refer to the following (1) thru. (4) for each mode.

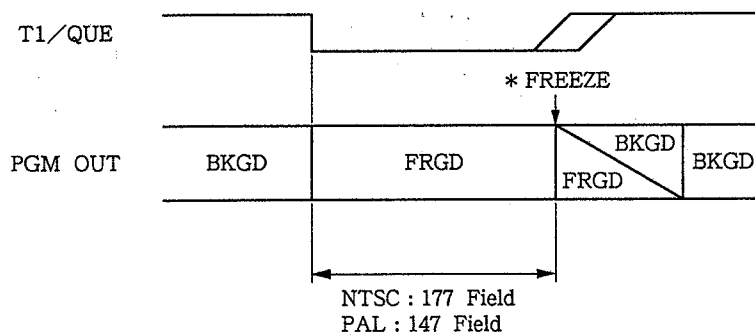

Factory Setting: "BVE-600"

(1) RM-450 (or RM-440) Mode

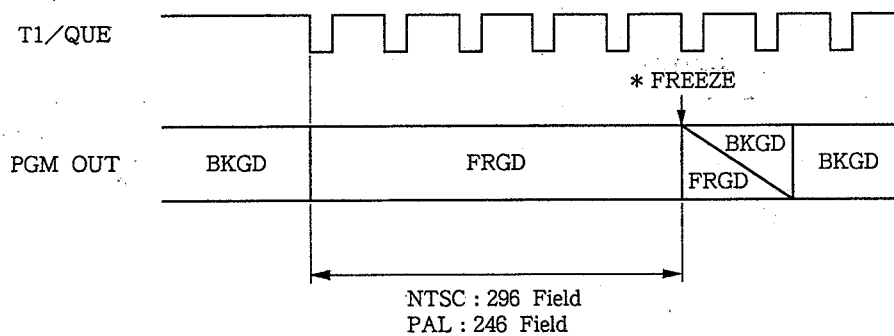

The CPU automatically distinguishes between the RM-450 and the RM-440 through the difference in their T1 signal waveforms. The control from the editor is through the T1/QUE signal. Operation timings are as follows.

[Operation Timing]

(i) RM-450

(ii) RM-440

- Freezes regardless of the position of the FREEZE switch.
- See "3-3-2. Effect Start Point Adjustment For RM-450 and RM-440" for the factory setting and adjustment.

(2) BVE-600 Mode

The control from the editor is through the T1/QUE and the T2 signals.

A-roll/AB-roll selection depends on the FREEZE switch setting.

Operation timings are as follows.

[Operation Timing]

(i) A-roll (FREEZE SWITCH on the Console Unit : IN)

(ii) AB-roll (FREEZE SWITCH on the Console Unit : OUT)

(3) BVE-900 Mode

The control from the editor is through the D-SUB (9 pin).

The T1/QUE and the T2 signals are not accepted.

(4) BVS-3000 SERIES Mode

The control from the editor is through the D-SUB (9 pin).

The T1/QUE and the T2 signals are not accepted.

Being set to the other than the BVS-3000 SERIES mode, one of the effects number 1900 through 1954 is excuted, the cross point is switched over in the middle of the transition. When the unit is set to the BVS-3000 SERIES mode, switching over of the cross point is performed by the BVS-3000 SERIES side. DME-450P does not switch over the cross point.

3-3-2. Effect Start Point Adjustment for RM-450 and RM-440

(1) Fine Adjustment Using the Rotary Switch

If any error occurs in the FREEZE POINT or EFFECT START POINT against the IN POINT when editing with the RM-450 or RM-440, the time between the trailing edge of the T1/QUE signal and the beginning of a freeze or effect can be fine adjusted using this switch.

If the FREEZE POINT is delayed more than the IN POINT set with the RM-450 or RM-440 the video signal will be oscillated. Then adjust the timing to make freeze point earlier.

Adjustment Points : Switch S1 on the SY-146P board (16 position rotary switch)

Factory Setting : 0

Position of the Rotary Switch	TIME	
	RM-450	RM-440
7	"0" Position - 7 Field	"0" Position - 7 Field
6	"0" Position - 6 Field	"0" Position - 6 Field
5	"0" Position - 5 Field	"0" Position - 5 Field
4	"0" Position - 4 Field	"0" Position - 4 Field
3	"0" Position - 3 Field	"0" Position - 3 Field
2	"0" Position - 2 Field	"0" Position - 2 Field
1	"0" Position - 1 Field	"0" Position - 1 Field
0	NTSC : 177 Field (2.95sec) PAL : 147 Field (2.94sec)	NTSC : 296 Field (4.93sec) PAL : 246 Field (4.92sec)
F	"0" Position + 1 Field	"0" Position + 1 Field
E	"0" Position + 2 Field	"0" Position + 2 Field
D	"0" Position + 3 Field	"0" Position + 3 Field
C	"0" Position + 4 Field	"0" Position + 4 Field
B	"0" Position + 5 Field	"0" Position + 5 Field
A	"0" Position + 6 Field	"0" Position + 6 Field
9	"0" Position + 7 Field	"0" Position + 7 Field
8	"0" Position + 8 Field	"0" Position + 8 Field

See "(2) Adjustments Using the Console Unit".

(2) Adjustment Using the Console Unit

The "0 position setting" mentioned in (1) can be changed. When an optimal timing is not obtained after performing "(1) Fine Adjustment Using the Rotary Switch", this adjustment is available. The optimal timing value also depends a little on the VTR being connected. Be sure to align the timing when the RM-450 (or RM-440) is used with settings other than those shown in (1).

Adjustment Point: Key in from the console unit.

Adjustment Procedure:

- (i) Press the "TAKE" key while pressing the "1" and "3" BKGD select keys on the console.

↓

The version number is displayed in the effect number display area on the console unit.

↓

The video phase is displayed in the effect number display area on the console.

- (ii) Press the "TAKE" key.

↓

The border position is displayed.

- (iii) Press the "TAKE" key.

↓

The RM-450 timing is displayed as shown below.

C XXX

0 ≤ XXX ≤ 999

A three digit number representing edge is displayed as a field number.

Factory Setting:

NTSC: 177

PAL: 147

- (iv) Set the field number to the required value by pressing the "UP" key or the "DOWN" key.

- (v) Press the "TAKE" key.

↓

The value set in the step (iv) will be stored in memory and the RM-440 timing is displayed as follows.

E YYY

0 ≤ YYY ≤ 999

Factory Setting:

NTSC: 296

PAL: 246

- (vi) Set the field number to the desired value by pressing the "UP" key or the "DOWN" key.

- (vii) Press the "TAKE" key.

↓

The value set in the step (vi) is stored in memory and the unit will return to normal operation mode.

(3) Mode Setting on the RM-450 and RM-440 side

The followings are the recommended settings for the RM-450 (or RM-440). When the RM-450 (or RM-440) is used with the settings other than those shown below, refer to the "(2) Adjustment Using the Console Unit".

- (i) RM-450

Pre-roll selector: 5 or 7 seconds

QUE OUT timing: 3 seconds

- (ii) RM-440

Pre-roll time: S (5 seconds)

3-3-3. Video Phase Adjustment

Adjustment Point : Key in from the console unit.

Adjustment Procedure :

- (i) Press the "TAKE" key while pressing the "1" and "3" BKGD select keys on the console unit.

↓

Version number is displayed.

↓

Video phase is displayed.

C5 4
└─ 0~9

The value increases one by one, the timing of the read-out the picture in the memory is delayed by every 140 msec steps.

The foreground picture on the monitor moves to the right.

- (ii) Adjust the video phase using the "UP" and "DOWN" keys so that the left/right directional phase difference between the background and the foreground becomes as small as possible.

Factory setting :

NTSC : 4

PAL : 6

- (iii) Press the "TAKE" key.

↓

Border position is displayed.

- (iv) Press the "TAKE" key.

↓

RM-450 IN POINT position is displayed.

- (v) Press the "TAKE" key.

↓

RM-440 IN POINT position is displayed.

- (vi) Press the "TAKE" key.

↓

The unit returns to normal operation mode.

3-3-4. Boder Position Adjustment

When the blanking is visible on the foreground effect picture within the border, this adjustment is useful.

Adjustment Point : Key in from the console unit.

Adjustment Procedure :

- (i) Press the "TAKE" key while pressing the "1" and "3" of BKGD select keys on the console unit.

↓

Version number is displayed.

↓

Video phase is displayed.

- (ii) Press the "TAKE" key.

↓

Border position is displayed.

C6 0
└─ 0~9

The value increases, the border moves to inside of the picture. (by 140 msec)

(iii) When the blanking is visible on the foreground effect picture within the border, adjust the border value. Move the border to inside and mask any blanking using the "UP" and "DOWN" keys.

(iv) Press the "TAKE" key.

↓

RM-450 IN POINT is displayed.

(v) Press the "TAKE" key.

↓

RM-440 IN POINT is displayed.

(vi) Press the "TAKE" key.

↓

The unit returns to normal operation mode.

SECTION 4

SELF DIAGNOSIS

4-1. SYSTEM CONTROL

4-1-1. Program Version Check

For : ROMs IC22 and IC23 on the SY-146P board

Procedure : After turning the power on, press the "TAKE" key while pressing the "1" and "3" of BKGD select keys.

Check : The version number is displayed in the effect number display area when the "TAKE" key is pressed in the step above.

Restoration : Turn the power off to restore the system.

4-1-2. Hardware Check

For : RAMs IC20 and IC21 on the SY-146P board

Procedure : After turning the power on, press the "TAKE" key while pressing the "1" and "3" of FRGD select keys.

Check :

(1) The unit will enter the console LED check routine. "0000", "1111", "222", "333", "444", "555", "666", "777", "888" and "999" are displayed in the effect number display area in order. Then every LED key will light in order shown in the figure. (Fig. 1)

(The LED light data is sent to the console unit from the system control board, SY-146P.)

(2) The unit will enter the read RAM check routine. RAM check status is displayed in the effect number display area.

Restoration : Turn the power off to restore the system.

Fig. 1

4-1-3. Effects Check

(1) All Effects Check

Procedure : Press the "TAKE" key while pressing one of the EFFECTS select keys "USER1" thru. "USER3".

Check : The effects are automatically executed one at a time beginning with the effect selected. However, any of the effect numbers that are not allotted will be skipped.

Restoration : To restore the system, press any key on the console unit for a few seconds.

(2) Same Effect Check

Procedure : Press the "TAKE" key while pressing "USER4" of the EFFECTS select keys.

Check : The effect selected as "USER4" is automatically executed, repeatedly.

Restoration : To restore the system, press any key on the console for a few seconds.

4-2. CONSOLE UNIT CHECK

4-2-1. LED Check

Procedure : Turn the power on while pressing the "TAKE" key.

Check :

(1) "0000", "1111", "222", "333", "444", "555", "666", "777", "888" and "999" are displayed in the effect number display area in order. Then every LED keys will light in order shown in the figure. (Fig. 1)

(The LED light data is produced by the internal CPU on the KY-163 board in the console unit.)

Restoration : Turn the power off to restore the system.

4-2-2. Program Version Check

For : IC9 on the KY-163 board

Procedure : Turn the power on while pressing the "TUMBLE" key.

Check : The program version number is displayed.

C200

Version Number

Restoration : Turn the power off to restore the system.

4-2-3. Hardware Check

(1) LED Check

Procedure : Before turning the power off in 4-2-2 above, press the "TAKE" key.

Check : "0000", "1111", "222", "333", "444", "555", "666", "777", "888" and "999" are displayed in the effect number display area in order.

(2) RAM Check

For : RAM IC10 on the KY-163 board

Procedure : Press the "TAKE" key before turning the power off in the above step (1).

Check : The RAM check status is displayed in the effect number display area.

C2 0

0 : Normal

1 : RAM error (IC10 of KY-163)

(3) ROM Check

For : ROM IC9 on the KY-163 board

Procedure : Press the "TAKE" key before turning the power off in the above step (2).

Check : The ROM check status is displayed.

C2 0
 └─ 0 : Normal
 1 : RAM error (IC9 of KY-163)

(4) Transmission Check

This mode is only for the factory's use.

Procedure : Press the "TAKE" key before turning the power off in the above step (3).

Check : The following status shown below appears in the effect number display area.

C4 1

(5) Key Switches Check

Procedure : Press the "TAKE" key before turning the power off in the above step (4).

Check : Press the keys in order from left to right, shown in the figure. (Fig.1)

Check that the LED corresponding to the pressed key lights.

(When a key is pressed in the wrong order, the buzzer sounds. Be sure to press the keys in order shown in the figure.)

(6) Freeze Switch Check

Check : The displays shown below appear in the effect number display area.

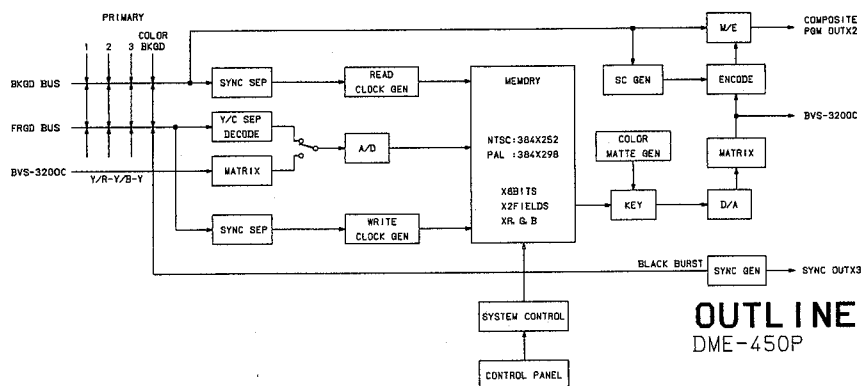

FREEZE IN : C6U

FREEZE OUT : C6 U

Restoration : Press the "TAKE" key.

等価回路はICメーカーのData Bookに従いました。

The circuit diagram of each IC is obtained from the IC data book published by the manufacturer.

SECTION 7
SCHEMATIC DIAGRAMS

Circuit information is provided below.

BOARD	FUNCTION
AD-44P	A/D Converter
DA-33P	D/A Converter
MY-41P	Memory Board
SY-146P	System Control Board
PU-69	Process Board
KY-163	Function Keyboard
MB-249	Mother Board
LE-55	Power Indicator
CN-231	Connector Board

回路図内において、REF. NO の近傍に下記記号が記載されていますが、これは生産時の部品データです。

In the schematic diagrams, the following marks are described nearby reference number.
These are parts data at factory.

SECTION 9

SPARE PARTS AND ACCESSORIES

9-1. PARTS INFORMATION

- (1) The shaded and Δ -marked components are critical to safety.
Replace only with same components as specified.
- (2) Replacement Parts supplied from the Sony Parts Center will sometimes have a different shape from the original parts. This is due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts".
This manual's exploded views and electrical spare parts list indicate the part numbers of "the standardized genuine parts at the present".
Regarding engineering part changes in out engineering department, refer to Sony service bulletins and service manual supplements.
- (3) The parts marked with "s" in the SP column of the exploded views and electrical spare parts list are normally stocked for replacement purposes.
The parts marked with "o" in the SP column are not normally required for routine service work. Orders for parts marked with "o" will be processed, but allow for additional delivery time.
- (4) Item with no part number and/or no description are not stocked because they are seldom required for routine service.

(5) ABBREVIATIONS

Ref. No.	Description
C	; CAPACITOR
CB	; CIRCUIT BREAKER
CN	; CONNECTOR
D	; DIODE
IC	; INTEGRATED CIRCUIT
L	; INDUCTOR
Q	; TRANSISTOR
R	; RESISTOR
RB	; RESISTOR BLOCK
RV	; VARIABLE RESISTOR
S (SW)	; SWITCH
T	; TRANSFORMER
X	; CRYSTAL

All capacitors are in micro farads unless otherwise specified.

All inductors are in micro henries unless otherwise specified.

All resistors are in ohms.

9-2. EXPLODED VIEW

Exploded views are composed of the following blocks.

- (1) Ornamental Block (Pross Unit Assy)
- (2) Chassis Block (Pross Unit Assy)
- (3) Rear Block (Pross Unit Assy)
- (4) Console Unit Assy
